

Course “Object-Oriented Programming in C++”**Week №16*****Homework*****Exercise 1.**

Write a program for the formation of the frequency dictionary of occurrence of certain words in a text. You should provide:

1. Reading the original text from the file
2. Output the information about all words
3. Output the information about the most common word
4. Record the result to a file

When developing the program use a dictionary of the type map.

Exercise 2.

Write a program "Automated information system of the railway station". the system includes the information on the administration of long-distance trains. For each train we specify the number, the time of departure, the destination station. You should provide:

1. Input the data to the system
2. Output the information about all trains
3. Output the information about the requested train
4. Use a container class vector

Exercise 3.

Implement the program “Dictionary” using a container map. Key features:

1. Search for a word;
2. Add, delete, edit words;
3. Read and record the dictionary to the file.
